POSTDOCTORAL POSITION

Our group is currently looking for a postdoctoral candidate with a Bioinformatics and Statistical Genetics background for a two-year contract

We request:

- PhD awarded.
- Demonstrated knowledge of statistics, statistical genetics, bioinformatics concepts, methods and tools. Familiarity with genomic data tools, repositories, and databases.
- Integrated analysis of genetic, gene expression, and other functional genomics datasets, such as gene ontology and network analysis
- Analysis of genome-wide association datasets, such as network/pathway approaches, expression QTLs.
- Bioinformatics with genomics (computational and analytical skills suited to large scale, multidimensional datasets). Programming skills in R, R/qtI, and others.
- Ability to work hard and independently while contributing to the team effort and adhering to deadlines.

We offer:

- 2 years contract (beginning early next year).
- A dynamic basic and translational research environment.
- Participation in a translational research project funded by national and regional grants to search for new genetic and molecular determinants of cancer susceptibility, evolution and treatment response.

If interested, please, send an updated CV and 2 contact references and a letter of interest stating your previous experience to:

Jesús Pérez Losada. Instituto de Biología Molecular y Celular del Cáncer (IBMCC) de Salamanca, Instituto Mixto Universidad de Salamanca/CSIC.
