

Course unit name: PRACTICUM IN BIOLOGY AND CLINIC OF CANCER**1.- General information**

Code	303000	Plan		ECTS	18
Type	Mandatory	Course	2023/2024	Periodicity	Annual
Department	Cancer Research Center				
Virtual Platform	Platform:	CICLOUD			
	URL de Acces:	http://cicloud.dep.usal.es/index.php/s/Gp0vghR305Y6glo/authenticate			

Faculty

Professors	ALMEIDA PARRA, Julia (PDI, USAL)	MATEOS MANTECA, MARÍA VICTORIA, (USAL)
	BLANCO VENAVENTE, Sandra (Científico titular, CSIC)	MORENO PÉREZ, Sergio (Profesor investigación, CSIC)
	BUENO NÚÑEZ, Andrés Avelino (Catedrático USAL)	MUÑOZ FÉLIX, José Manuel (Profesor Ayudante Doctor)
	CASTELLANO SÁNCHEZ, Esther (Científico titular, CSIC)	ORFAO DE MATOS, Alberto (Catedrático, USAL)
	DOSIL CASTRO, Mercedes (PDI, USAL)	PANDIELLA ALONSO, Atanasio (Profesor Investigación,CSIC)
	DROSTEN, Matthias (Investigador, CSIC)	PEREDA VEGA, José María de (Científico Titular, CSIC)
	ÉSPARIS OGANDO, Azucena (Contratado doctor ISCI)	PÉREZ BLANCO, JONÁS SAMUEL (Prof Contratado Doctor)
	FERNÁNDEZ MEDARDE Alberto (PDI, USAL)	PÉREZ LOSADA, Jesús (Científico Titular, CSIC)
	FUENTES GARCÍA, Manuel (PDI, USAL)	PERICACHO BURGOS, Miguel (Profesor Contratado Doctor)
	GARCÍA BUSTELO Xosé Ramón (Profesor Investigación, CSIC)	RIVAS SANZ, Javier de las (Investigador, CSIC)
	GARCÍA SÁNCHEZ, Mª José (Catedrática, USAL)	RODRÍGUEZ BARBERO Alicia (PDI, USAL)
	GONZÁLEZ DÍAZ, Marcos (Catedrático, USAL)	SACRISTÁN MARTÍN, María de la Paz (PDI, USAL)
	GONZÁLEZ SARMIENTO, Rogelio (Catedrático, USAL)	SÁNCHEZ GARCÍA, Isidro (Investigador, CSIC).
	GUERRERO ARROYO, Carmen (PDI, USAL)	SÁNCHEZ-GUIJO MARTÍN, Fermín(Profesor USAL)
	HERNANDEZ RIVAS, Jesús María (Catedrático, USAL)	SÁNCHEZ MARTÍN, MANUEL A. (PDI, USAL)
	HOLGADO MADRUGA, Marina (PDI, USAL)	SÁNCHEZ NAVARRO, AMPARO (Catedrática USAL)
	HURTADO RODRÍGUEZ, Antoni (Investigador CSIC)	SANTAMARÍA, DAVID (Investigador, CSIC)
	LAZO-ZBIKOWSKI TARACENA, Pedro (Profesor investigación, CSIC)	SANTOS DE DIOS, Eugenio (Catedrático, USAL)
	LLANO CUADRA, Elena (PDI, USAL)	VICENTE MANZANARES, Miguel (Científico Titular, CSIC)
	MARTÍN PENDÁS, Alberto (Científico Titular, CSIC)	
Center	Cancer Research Center	

2.- The course in the context of the Master's Program

Treaning Module

From October to June. One academic year

General aim of the subject

The student carry out, throughout the academic year and under the direct supervision of a tutor, a research project in the field. It constitutes a starting point in the scientific career preparing students for inclusion in PhD programs.

Professional specialization

Researchers specialized in molecular, cellular and/or clinical oncology aspects.

3.- Previous recommendations

Degree in Biology, Biochemistry, Biomedicine, Biotechnology or Pharmacy.

4.- Aims of the subject

To offer an suitable experimental framework, where students can acquire the theoretical-practical knowledge and technical skills necessary to choose and develop both independently and in collaboration a competitive scientific project in the field of cancer molecular biology.

5.- Contents

The student will choose one of the following research projects.

These themes of work will be evaluated and adapted every academic year according to the availability and supply of researchers.

RESEARCH PROJECT	RESEARCH GROUP
“Biological characterization of T- and NK-cell neoplasms”	Julia Almeida Parra
“Cancer epitranscriptomics”	Sandra Blanco Benavente
“Genomic stability: Regulation of replication and the DNA Damage Tolerance”	Andrés Avelino Bueno Núñez María Sacristán Martín
“Molecular mechanisms mediating tumour:stroma crosstalk”	M. Esther Castellano Sánchez
“Deregulation of ribosome production in cancer cells”	Mercedes Dosil Castro
“Molecular characterization of resistance mechanisms to targeted therapies in lung cáncer”	Matthias Drost

"Identification of novel therapeutic targets for KRAS-mutant lung cancer"	
"Identification and validation of new oncogenic drivers in hematopoietic and solid tumors" "Development of new pharmacological strategies to block early oncogenic signaling proteins in cancer"	<u>Xosé R. García Bustelo</u>
"Clinical Pharmacokinetics of methotrexate"	<u>María José García Sánchez</u>
"Hereditary cancer and epigenetic modifiers in the treatment of cancer"	<u>Rogelio González Sarmiento</u>
"New treatments in hemopathies: from the laboratory to the clinic" "Role of the bone marrow microenvironment in the pathology of multiple myeloma" "Study of new therapeutic combinations and resistance mechanisms in multiple myeloma: targeted drugs and immunotherapies"	<u>Marcos González Díaz</u> <u>Mercedes Garayoa Berrueta</u> <u>María Teresa Paíno Gómez</u>
"Role of C3G in the biology of platelets and megakaryocytes. Understanding the role of C3G in hematopoiesis and hematopoietic stem cell (HSC) disorders"	<u>Carmen Guerrero Arroyo</u>
"Molecular Cytogenetics in Oncology" "NGS and Big Data in hematological malignancies"	<u>Jesús María Hernández Rivas</u>
"Mechanisms of hormone resistance and breast cancer"	<u>Toni Hurtado</u>
"Epigenetic regulation of chromatin and its implication in cancer, neurodegeneration and rare diseases"	<u>Pedro Lazo-Zbikowski Taracena</u>
"Development and characterization of new murine models of chromosomal instability and their involvement in cancer, aging and fertility"	<u>Elena Llano Cuadra</u> <u>Alberto Martín Pendás</u>
"Role of the NGF/TrkA signaling pathway in pain, identification of potential therapeutic targets" "The Gab1 docking protein in breast cancer and its possible use as a therapeutic target"	<u>Marina Holgado</u>
"Molecular mechanisms regulating cell growth and division: implications in cancer and aging"	<u>Sergio Moreno Pérez</u>
"New strategies for treatment of non-angiogenic tumors and metastases"	<u>José Manuel Muñoz Félix</u>
"Characterization of the genetic alterations and signaling pathways involved in the clonal development and neoplastic transformation of B cells of subjects with clonal B lymphocytosis (MBL) vs patients with chronic lymphatic leukemia (LLC)"	<u>Alberto Orfao de Matos</u> <u>Julia Almeida Parra</u> <u>Manuel Fuentes García</u>
"Targeting ErbB/HER receptors in cancer"	<u>Atanasio Pandiella</u> <u>Azucena Ésparis Ogando</u>
"Structural biology of cell adhesion and signaling"	<u>José María de Pereda Vega</u>
"Population pharmacokinetics and dosage optimization strategies of high-dose methotrexate"	<u>Jonás Samuel Pérez Blanco</u> <u>José Germán Sánchez Hernández</u>

"Model-Informed Precision Dosing of anticancer drugs"	<u>Amparo Sánchez Navarro</u>
"Identification of the genetic components responsible for the influence of stem cells on the response to breast cancer treatment"	<u>Jesús Pérez Losada</u>
"Role of endoglin in angiogenesis and tumor angiogenesis"	<u>Alicia Rodríguez Barbero</u> <u>Miguel Pericacho Bustos</u>
"Bioinformatics and Functional Genomics in Cancer: discovery of biomarkers, gene signatures and regulators in omic data"	<u>Javier de las Rivas Sanz</u>
"Mechanisms responsible for clonal evolution with the aim of leukemia prevention"	<u>Isidro Sánchez García</u>
"Bone marrow-derived stem cells. biological characteristics & potential role in the development of hematological malignancies"	<u>Fermín Sánchez- Guijo Martín</u> <u>Sandra Muntión</u>
"Genome editing by CRISPR-Cas9 technology: generation of mouse models of human cancer and correction of human leukaemic stem cells"	<u>Manuel A. Sánchez Martín</u>
"Understanding KRAS behaviour at the inner membrane: implications for oncogenic output and therapeutic inhibition"	<u>David Santamaría</u>
"Structure and function of Ras oncogenes and their molecular regulators"	<u>Eugenio Santos de Dios</u>
"Force generation and mechanotransduction during metastasis and the anti-tumor immune response" "Epigenetics of force generation" "Biophysics of the cellular responses to chemotherapy and immunotherapy"	<u>Miguel Vicente Manzanares</u>

6.- Skills to be acquired

Basic skills
<ul style="list-style-type: none"> - Capacity for analysis, global visions, synthesis and practical application of knowledge - Understand the meaning and achieve of each of the basic experimental techniques in molecular biology in advancing knowledge of cancer.
Specific skills
<ul style="list-style-type: none"> - To acquire the technical skills necessary to develop a scientific project in the area. - To develop the ability to design relevant experiments to confirm raised hypothesis. - Students will be able to apply the scientific method to the experimental approaches that are used in cancer research. - Know how to plan a clinical trial: susceptible population, inclusion and exclusion criteria, efficacy and toxicity assessment methods. - Critical thinking and understanding the importance of multidisciplinary research for the knowledge of cancer.

7.- Teaching methodology

The eminently practical nature of this mandatory subject implies that students carry out their projects in the laboratory under the direct supervision and teaching of their researchers

8.- Estimated learning time

	Hours tutored by the teacher		Individual work (hours)	TOTAL HOURS
	Attendance required (hours)	Distance learning (hours)		
Lectures				
Practices	- In classroom			
	- In laboratory	200		200
	- In computer classroom			
	- Countryside			
	- Visualization classroom			
Seminars				
Work presentations and debates				
Tutorials	20			20
Online activities				
Work preparation			80	80
Other activities				
Exams - evaluation				
	TOTAL	220	80	300

9.- Materials

Books
Other bibliographical, electronic references or any other type of resource

10.- Assessment

Assessments on the performance of the student
<ul style="list-style-type: none"> - Attendance at the designated laboratory will be evaluated always in accordance with the work program proposed by the tutor. (10% of the final grade) - Ability to learn the laboratory techniques necessary to carry out the practical work assigned by the subject's tutor. (30% of the final grade) - Professional interaction of the students with the members of the assigned laboratory and their ability to carry out teamwork. Attendance and capacity for interaction and participation in the seminars of the assigned group, understanding that both participation and the establishment of a critical dialogue are evaluable. (30% of the final grade) - Ability to design and elaborate relevant experiments autonomously, as well as their ability to select scientific works and assess their contribution to the research topic; it is therefore about evaluating the maturity and critical capacity acquired by the student. (30% of the final grade).
