Course unit name: INTRODUCTION TO THE MOLECULAR MEDICINE OF CANCER

1.- General information

Code	303002	Plan		ECTS	3	
Туре	Mandatory	Course	2023/2024	Periodicity	1 st Semester	
Department	Cancer Research Center					
Virtual	Platform:	CICLOUD				
Virtual Platform	URL de Acces:	http://cicloud.dep.usal.es/index.php/s/Gp0vghR305Y6glo/authenticate				

Faculty

Professor Coordinator	Dr. Rogelio González Sarmiento			
Research area	Medicine			
Center	Institute of Molecular and Cellular Biology of Cancer			
Office	Laboratory 14			
URL Web	https://www.cicancer.org/grupo?id=29			
E-mail	gonzalez@usal.es	Phone	+34 923294814	

2.- The course in the context of the Master's Program

Treaning Module

Second block of the academic year of the six in which it is divided.

General aim of the subject

Describe and correlate the clinical and molecular findings that allow defining the different general types of cancers and their current application in the diagnosis, prognosis and treatment of patients

Professional specialization

3.- Previous recommendations

NIAt	$^{\circ}$	nlin	anı.	\sim
Not	au	DIIC	au	;

4.- Aims of the subject

The objective of the subject is to describe and correlate the clinical and molecular findings that allow defining the different general types of cancers and their current application in the diagnosis, prognosis and treatment of patients. In addition, the different hereditary cancer syndromes and the genetic alterations that characterize them together with the criteria and conditions of the genetic counseling in hereditary cancer will be studied.

- Understand the clinical aspects and molecular causes that explain the different diagnostic and therapeutic approach to the different types of cancers.
- To know the different types of cancer grouped by location, their characteristics molecular and the basic criteria of diagnosis, prognosis and treatment.

5.- Contents

Theory

- 1. Cancer Epidemiologyr.
- 2. Primary and secondary prevention.
- 3. Diagnostic procedures.
- 4. Cancer tratment.
- 5. Brain tumors
- 6. Head and Neck tumors
- 7. Esophagus and gastric tumors
- 8. Colon tumors
- 9. Liver and bile duct tumors
- 10. Lung tumors
- 11. Breast tumors
- 12. Ovarian tumors
- 13. Endometrial tumors
- 14. Prostate tumors
- 15. Bladder tumors
- 16. Skin tumors
- 17. Hereditary cancer
- 18. Clinical trials

Seminars:

Discussion articles.

6.- Skills to be acquired

Specific skills

- -Recognize the specific clinical and molecular characteristics of different types of cancers, diagnostic methods and therapeutic approaches.
- -To know what methods are used in the diagnosis and treatment of different types of cancers.
- -Know how to interpret a molecular study, a family tree.

7.- Teaching methodology

The student must attend the assessable theoretical sessions of the course having previously read and understood the recommended bibliography; The first session will focus on the approach of the sessions and their organization, discussion of the doubts and comments of the students.

8.- Estimated learning time

		Hours tuto tead Attendance required (hours)	-	Individual work (hours)	TOTAL HOURS
Lectures		(1.0 a. 0)	()		
	- In classroom	20			20
D	- In laboratory	15		10	25
Practices	- In computer classroom				
	- Countryside				
	- Visualization classroom				
Seminars					
Work presentations and debates		20			20
Tutorials		8			8
Online activities					
Work preparation					
Other activities					
Exams - evaluation		2			2
	TOTAL	65		10	75

9.- Materials

Books	
Other bibliographical electronic references or any other type of resource	

10.- Assessment

Assessments on the performance of the student

Continuous evaluation of participation in theoretical sessions and seminars (50% of the final grade). Completion of the written course evaluation (50% of the final grade)
