

Dr. Martínez Riaño did her PhD with Prof. Balbino Alarcón (CBMSO, Madrid) studying the role of small GTPases during the immune response. Afterwards, she joined the laboratory of Prof. Pavel Tolar (The Francis Crick Institute/UCL, London) where she studied the persistence of antigens on the secondary lymphoid organs. Recently, she joined the laboratory of Prof. Ignacio Melero (CIMA, Pamplona) to study new immunomodulatory therapies. Her main interest resides in understanding the immune-stromal crosstalk that facilitates the humoral response.
