

Dr. Martín Duque is a researcher in the fields of gene therapy and oncological nanobiotechnology, with over 95 publications (most of them in Q1) and competitive national and international projects. Her career is distinguished by research stays at world-class centers (such as CR-UK, Cornell, MD Anderson, and Imperial College), the authorship of four patents—receiving the “Best Patent by a Female Inventor” award in 2024—and significant knowledge transfer to the productive sector and patient associations. She is a member of the Royal Academy of Medicine of Zaragoza and has combined her scientific work with high-level science policy management as Vice-Rector for Research at San Jorge University and as an expert evaluator for the European Commission (Marie Curie and HADEA).
